

Newsletter Features

Would you like us to feature your company or university in a future Rocscience Email Newsletter?

Among the most interesting features of the newsletter are the commercial and educational projects we receive from our readers. Through our contributors, our readers can look forward to learning about a variety of new developments in the engineering field, from both a commercial and educational point of view.

Although we are always interested in projects using Rocscience software, we also want to choose projects that will be interesting also useful to our readers, even if they do not use our software. If you have questions before preparing your topic, contact Evelyn Cunningham at evelyn@rocscience.com.

Our Rocscience Email Subscribers are interested in your work.

■ Top Projects

What are the areas of expertise in your company? Share one of your most interesting projects with our readers.

What area of research is your university department known for?

Let your colleagues and potential students know what is current in your field of research. We are particularly interested in receiving problems that professors have used in their classes using the Rocscience software. We are building a library of teaching resources such as problem sets for educational use.

■ Leaders in the Field

Newsletter subscribers may want to know more details about the company or university presenting the project or research field.

■ Link to your website

If we pick your company or university for a future newsletter, the Top Project will link to a page that describes your project in detail. In the same issue, Leaders in the Field will link to your website, allowing our readers to learn more about your company or university.

What we will need from you.

■ Companies

Please submit a 2-3 page description of your project. Your company logo and website should also be included. Photos, screen captures, etc. will make your presentation more interesting.

■ Universities

Please present your project or class problem set using the software, along with your logo and website.
